Dhanmondi, Dhaka, Bangladesh

SOFTWARE ENGINEER

Software Engineer experienced in building scalable backend services and full-stack web applications. Strong background in API design, authentication systems, and performance optimization using Java, Spring Boot, Node.js, and React. Experienced working in Agile teams to deliver production-ready systems. Interested in distributed systems, secure infrastructure, and building reliable software that serves users at scale.

TECHNICAL SKILLS

Languages	: Java, JavaScript, Python, C++, PHP, C#
Frameworks	: Spring Boot, React.js, Next.js, Express, Node.js
Databases	: PostgreSQL, MongoDB, Oracle
Infrastructure	: Docker, REST APIs, JWT Authentication
Tools	: Git, VS Code, Jira, Trello, Notion
Practices	: Agile Development, Code Refactoring, Testing, API Design

PROFESSIONAL EXPERIENCE

Synesis IT PLC <i>October 2025 – Present</i>	Software Engineer I <i>Dhaka, Bangladesh</i>
- Develop backend services using Java and Spring Boot for large-scale government and enterprise platforms including E-TIN and School Management systems. - Designed and maintained multiple backend modules supporting secure data processing and system integration. - Implemented JWT-based authentication and authorization for secure user access. - Optimized and refactored APIs to improve performance, reliability, and maintainability. - Worked closely with engineers, product stakeholders, and QA teams in Agile development cycles.	
Synesis IT PLC <i>June 2024 – October 2024</i>	Backend Developer Intern <i>Dhaka, Bangladesh</i>
- Contributed to backend development as part of the E-TIN engineering team. - Integrated secure authentication and authorization using JWT. - Connected backend services to Angular frontend applications. - Participated in code refactoring and Agile sprint development.	
IUT Mars Rover Anirban <i>2022 – Present</i>	Sub Executive, Documentation Team <i>Bangladesh</i>
- Prepared technical documentation for international engineering competitions. - Collaborated with cross-functional team members to produce structured technical reports.	

PROJECTS

Facial Text Emotion Detector & Emoji Generator <i>Machine Learning, NLP</i>	GitHub 2024
- Built a multimodal emotion detection system using facial recognition and natural language processing. - Improved prediction accuracy through preprocessing and model tuning.	
EduCast <i>MERN Stack</i>	GitHub 2023
- Developed full-stack educational platform with authentication and content management. - Built responsive frontend using React.js.	
ResuMetrics <i>MERN Stack</i>	GitHub 2023
- Created job portal and resume builder with matching functionality. - Improved user experience through streamlined interface design.	

PUBLICATIONS

From Chat to Checkup: Can Large Language Models Assist in Diabetes Prediction?
Shadman Sakib et al.

- Evaluated large language models for medical prediction tasks using structured datasets.

IEEE Xplore
2025

From Reviews to Requirements: Can LLMs Generate Human-Like User Stories?
NLP4RE'26

- Research on generating software requirements from user reviews using NLP models.

Accepted
2026

EDUCATION

Islamic University of Technology
2021 – 2025

- CGPA: 3.28 / 4.00

BSc in Computer Science and Engineering
Bangladesh
